

TMI-Orion is an internationally recognized name in the measurement of ceramic drying and curing processes.

Present on the market since 1994, we have pursued a sustained Research and Development strategy. Our goal is to offer the data logger that you need, the performance that you expect, the quality that you count on and the service that you deserve.

This brochure demonstrates our dedication to the ceramic industrial sector. You will find in it all kinds of data loggers to monitor your processes. You will find a way to analyze all the physical parameters you need: temperature, humidity, shrinkage, air velocity. Our user friendly software is in constant evolution for meeting your data processing expectations. And the radio data transmission option is available on most of our products for real time process monitoring.

All these features demonstrate our commitment to customer satisfaction. Do not hesitate to contact us or our very dedicated and competent business partners all over the world..
